```
def run(a):
    inp_file=a+'.cpp'
    exe_file=a+'.exe'
    os.system('g++  ' + inp_file + '  -o  ' + exe_file)
    os.system(exe_file)
if __name__=='__main__':
        main(sys.argv[1:])
```

Output of the above program

```
C:\Users\Dell>python c:\pyprg\main.py -i c:\pyprg\hello
c:\pyprg\hello.cpp: In function 'int main()':
c:\pyprg\hello.cpp:7:19: error: expected ';' before 'return'
  std::cout<<"hello"
                   ^
                   ;
  return 0;
  ~~~~~~
'c:\pyprg\hello.exe' is not recognized as an internal or external command,
operable program or batch file.
```

Note

In the above program Python helps to display the error in C++. The error is displayed along with its line number. The line number starts from the beginning of the C++ program

Points to remember:

- C++ is a compiler based language while Python is an interpreter based language.
- C++is compiled statically whereas Python is interpreted dynamically
- A static typed language like C++ requires the programmer to explicitly tell the computer what "data type" each data value is going to use.
- A dynamic typed language like Python, doesn't require the data type to be given explicitly for the data. Python manipulate the variable based on the type of value.
- A scripting language is a programming language designed for integrating and communicating with other programming languages
- MinGW refers to a set of runtime header files, used in compiling and linking the code of C, C++ and FORTRAN to be run on Windows Operating System
