15.12 Integrating Query With Csv File

You can even store the query result in a CSV file. This will be useful to display the query output in a tabular format. In the following example **(EXAMPLE 15.12 -1)** Using Python script the student table is sorted "gender" wise in descending order and then arranged the records alphabetically. The output of this Query will be written in a CSV file called "SQL.CSV", again the content is read from the CSV file and displayed the result.

Example 15.12 -1

```
import sqlite3
import csv
                                        #  CREATING CSV FILE
d=open('c:/pyprg/sql.csv','w, newline= ' ')
c=csv.writer(d)
connection = sqlite3.connect("Academy.db")
cursor = connection.cursor()

cursor.execute("SELECT *  FROM student ORDER BY GENDER DESC,SNAME")
                                #  WRITING THE COLUMN HEADING
co = [i[0] for i in cursor.description]
c.writerow(co)
data=cursor.fetchall()
for item in data:
        c.writerow(item)
d.close()
#  Reading the CSV File
with open('c:/pyprg/sql.csv', "r") as fd:
        for line in fd:
                line = line.replace("\n", "")
                print(line)
cursor.close()
connection.close()
```

OUTPUT

```
Rollno,Sname,Grade,gender,Average,birth_date
1, Akshay, B, M, 87.8, 2001-12-12
2, Aravind, A, M, 92.5, 2000-08-17
3, BASKAR, C, M, 75.2, 1998-05-17
7, TARUN, D, M, 62.3, 1999-02-01
5, VARUN, B, M, 80.6, 2001-03-14
6, PRIYA, A, F, 98.6, 2002-01-01
4, SAJINI, A, F, 95.6, 2002-11-01
```
