**Example 15.12 -2 Opening the file ("sqlexcel.csv") through MS-Excel and view the result (Program is same similar to EXAMPLE 15.12 -1 script)**

```
import sqlite3
import csv
# database name to be passed as parameter
conn = sqlite3.connect("Academy.db")
print("Content of the table before sorting and writing in CSV file")
cursor = conn.execute("SELECT * FROM Student")
for row in cursor:
        print (row)
#  CREATING CSV FILE
d=open('c:\pyprg\sqlexcel.csv','w', newline= ' ')
c=csv.writer(d)
cursor = conn.cursor()
cursor.execute("SELECT * FROM student ORDER BY GENDER DESC,SNAME")
#WRITING THE COLUMN HEADING
co = [i[0] for i in cursor.description]
c.writerow(co)
data=cursor.fetchall()
for item in data:
        c.writerow(item)
d.close()
print("sqlexcel.csv File is created open by visiting c:\pyprg\sqlexcel.csv")
conn.close()
```

Note

By default while writing in a csv file each record ends with \n (newline) to eliminate this newline replace () is used during the reading of csv file.
