India's Commitment to Paris Deal

- In anticipation of this moment, countries publicly outlined what post-2020 climate actions they intended to take under the new international agreement, known as their Intended Nationally Determined contributions.
- In its INDC, India has pledged to improve the emissions intensity of its GDP by 33 to 35 per cent by 2030 below 2005 levels. It has also pledged to increase the share of non-fossil fuels-based electricity to 40 per cent by 2030. It has agreed to enhance its forest cover which will absorb 2.5 to 3 billion tonnes of carbon dioxide (CO_2, the main gas responsible for global warming) by 2030 INDCs.
- India has also reiterated its need for international finance and technology support to meet its climate goals. In this regard, it has said it would require at least US $ 2.5 trillion (at 2014-15 prices) to meet its climate change actions between now and 2030.

Apart from the mandatory periodical review every five years to assess the contributions of the State Parties, the treaty also ensures that the developed countries shall help LDCs in adapting with the climate change through "climate finance" to enable them to switch over to renewable energy. Until now, 184 out of the 197 State Parties have ratified the treaty.

Activity

US President Donald Trump has announced withdrawl from Paris deal. In the context the students are requested to discuss the world response regarding post Kyoto to reduce globe warming.

12.3 India's Stand on Environmental Issues

India's engagement in global environmental governance has been remarkable. From the 1972 Stockholm Conference to the COP21 in 2015, New Delhi possesses impressive credentials in terms of the diplomatic and administrative capital invested. The then Prime Minister Indira Gandhi's speech at the Stockholm Conference evoked a new sense of politico-environmental consciousness which held the developed countries, i.e. North, responsible for escalating the ecological threat indicators. The ideological undercurrents of the Indian environmental policies, particularly the climate change, can be traced back to the preparations for the Rio Earth Summit 1992 wherein an important report titled "Global Warming in an Unequal World" of the Centre for Science and Environment (CSE) which attacked the West for its ginormous contribution to the global carbon footprint as "carbon colonialism". India has invariably rejected GHG reduction commitments from the developing countries as inequitable provided that the "South" has played a little role in triggering the so-called "climate issues" of the present day magnitude.
