11. Animals that can move from fresh water to sea called as.....

    a) Stenothermal b) Eurythermal

    c) Catadromous d) Anadromous

12. Some organisms are able to maintain homeostasis by physical means ...

    a) Conform **b) Regulate**

    c) Migrate d) Suspend

13. What is a Habitat?

14. Define ecological niche.

15. What is Acclimatisation?

16. What is Pedogenesis?

17. What is soil permeability?

18. Differentiate between Eurytherms and Stenotherms.

19. Explain hibernation and aestivation with examples.

20. Give the characters of a Biome?

21. Classify the aquatic biomes of Earth.

22. What are the ways by which organisms respond to abiotic factors?

23. Classify the adaptive traits found in organisms.

24. Differentiate Natality and Mortality.

25. Differentiate J and S shaped curve.

26. Give an account of population regulation.

27. Give an account of the properties of soil.

28. Differentiate between Tundra and Taiga Biomes.

29. List the adaptations seen in terrestrial animals.

30. Describe Population Age Distribution.

31. Describe Growth Models/Curves.

32. Tabulate and analysis of two species population interaction.
