4. HUMAN MENDELIAN TRAITS

AIM

To assess the distribution of various genetic traits in a given population.

MATERIALS REQUIRED

- List of traits
- Sheet of paper

PROCEDURE

- The students are divided into groups and the assessment of the various genetic traits are done , first individually and then among themselves.
- The phenotype and the possible genotypes are recorded in the tabular column.
- Based on the occurrence of the traits , the frequency of the dominant and recessive characters were discussed.

TRAIT	POSSIBLE ALLELES	NO.	%	MY PHENOTYPE	MY GENOTYPE (DOMINANT OR RECESSIVE)
Cleft chin	Have cleft (C) No Cleft (c)				
Hair curl	Curly (H) Straight (h)				
Tongue rolling	Roller (T) Non roller (t)				
Dimples	Dimple (D) No dimples (d)				
Earlobes	Free lobe (F) Attached (f)				
Interlocking fingers	Left thumb on top (L) Right thumb on top (l)				
Handedness	Right (R) Left (r)				
Widow's peak	Widow's peak (W) Straight (w)				
Shape of the face	Oval (O) Square (o)				
Finger mid-digital hair	Hair (M) No hair (m)				

INFERENCE

Discuss and answer the following questions :

1) Did you have mostly dominant or recessive traits?
2) For which trait were most students dominant?
3) For which trait were most students recessive?
