Nitrobenzene does not undergo Friedel – Crafts reactions due to the strong deactivating nature of $-NO_2$ group.

Evaluate yourself Predict the major product that would be obtained on nitration of the following compounds

13.2 Amines - clasification

Amines

- Aliphatic amines
- Aromatic amines

		Aliphatic amines	Aromatic amines
Primary		$CH_3-CH_2-NH_2$ ethanamine	$C_6H_5-NH_2$ benzenamine(aniline)
Secondary	simple	$CH_3-NH-CH_3$ N-methylmethanamine	$C_6H_5-NH-C_6H_5$ N-phenylbenzenamine
	mixed	$CH_3-NH-CH_2-CH_3$ N-methylethanamine	$C_6H_5-NH-CH_3$ N-phenylmethanamine
Tertiary	simple	$CH_3-N(CH_3)-CH_3$ N,N-dimethylmethanamine	$C_6H_5-N(C_6H_5)-C_6H_5$ N,N-diphenylbenzenamine
	mixed	$CH_3-N(CH(CH_3)_2)-CH_2-CH_3$ (N-ethyl-N-methyl) propan–2–amine	$C_6H_5-N(CH_3)-CH_2-CH_3$ N-methyl-N-phenylethanamine
