TRANSITION AND INNER TRANSITION ELEMENTS

Martin Heinrich Klaproth, (1743— 1817)

Martin Heinrich Klaproth, German chemist who discovered uranium, zirconium and cerium . He described them as distinct elements, though he did not obtain them in the pure metallic state. He verified the discoveries of titanium, tellurium, and strontium, His role is the most significant in systematizing analytical chemistry and mineralogy.

RMW3V

Learning Objectives

After studying this unit, the students will be able to

- recognise the position of d and f block elements in the periodic table
- describe the general trend in properties of elements of 3d series
- discuss the trends in M^{n+}/M standard electrode potential
- predict the oxidising and reducing property based in E^{o} values
- explain the tendencies of d-block elements towards the formation of alloy, complex and interstitial compounds
- describe the preparation and properties of potassium permanganate and potassium dichromate
- describe the properties of f-block elements
- compare the properties of lanthanoides and actinides
