Remedial measures to control Water Pollution

1. Comprehensive water management plan.
2. Construction of proper storm drains and settling ponds.
3. Maintenance of drain line.
4. Effluent and sewage treatment plant.
5. Regular monitoring of water and waste water.
6. Stringent actions towards illegal dumping of waste into the water bodies.

10.7.3 Noise Pollution

Definition

Noise pollution is unwanted or excessive sound that can have deleterious effects on human health and environmental quality. Noise pollution is commonly generated by many factories. It also comes from highway, railway and airplane traffic and from outdoor construction activities.

-Jerry A. Nathanson and Richard E. Berg, 2018

Types of Noise Pollution

i. **Atmospheric Noise**: Atmospheric noise or static is caused by lighting discharges in thunderstorms and other natural electrical disturbances occurring in the atmosphere.

ii. **Industrial Noise**: Industrial noise refers to noise that is created in the factories. Sound becomes noise it becomes unwanted. Heavy industries like ship building, iron and steel have long been associated with Noise Induced Hearing Loss (NIHL).

iii. **Man made Noise**: The main sources of man-made noise pollution are ships, aircraft, seismic exploration, marine construction, drilling and motor boats.

Causes of Noise Pollution

i. **Poor urban planning**: Improper urban planning will cause more nuisances among the city travelers.

ii. **Sounds from motor vehicles**: Sounds from motor vehicles can cause temporary hearing loss.

iii. **Crackers**: Enormous Crackers are used during some occasions. Such activities create a very louder noise to the level of harming the public. Sometimes, they may even cause deafness to children and aged.

iv. **Factory machinery**: The industrial noise caused by continuous operation of mills, machines and pneumatic drills, is unbearable nuisance to the workers.
