Disulphuric acid or pyrosulphuric acid	$H_2S_2O_7$	
Peroromono sulphuric acid	H_2SO_5	
Peroxodisulphuric acid. Marshall's acid	$H_2S_2O_8$	
Dithionic acid	$H_2S_2O_6$	
Polythionic acid	$H_2S_{n+2}O_6$	

3.3 Group 17 (Halogen group) elements:

3.3.1 Chlorine

Occurrence:

The halogens are present in combined form as they are highly reactive. The main source of fluorine is fluorspar or fluorite. The other ores of fluorine are cryolite, fluroapatite. The main source of chlorine is sodium chloride from sea water. Bromides and iodides also occur in sea water.

Physical properties:

The common physical properties of the group 17 elements are listed in the table.

Table 3.3 Physical properties of group 17 elements

Property	Fluorine	Chlorine	Bromine	Iodine	Astatine
Physical state at 293 K	Gas	Gas	Liquid	Solid	Solid
