Illustration 2

Complex	$[Ni(CN)_4]^{4-}$
Central metal atom/ion and its outer electronic configuration	Ni^{2+}: $3d^8$, $4s^0$
Outer orbitals of metal atom/ion	Nature of ligand	CN^- Strong field ligand causes the pairing of 3d electrons in the metal
Outer orbitals of metal atom/ion in presence of ligands	Hybridisation	Coordination number - 4 Hybridsation - dsp2
Hybridised orbitals of the metal atom in the complex	Geometry	Square planar
Magnetic property	No. of unparied electrons = 0; Hence diamagnetic
Magnetic moment (Using spin only formula)	$\mu_s = \sqrt{n(n+2)} = 0$

Illustration 3

Complex	**$[Fe(CN)6]^{3-}$**
Central metal atom/ion and its outer electronic configuration	Fe^{3+}: $3d^5$, $4s^0$
Outer orbitals of metal atom/ion	Nature of ligand	CN^- Strong field ligand causes the pairing of 3d electrons in the metal
