17. Give the difference between double salts and coordination compounds.
18. Write the postulates of Werner's theory.
19. $\left[Ni(CN)_4\right]^{2-}$ is diamagnetic, while $\left[NiCl_4\right]^{2-}$ is paramagnetic , explain using crystal field theory.
20. Why tetrahedral complexes do not exhibit geometrical isomerism.
21. Explain optical isomerism in coordination compounds with an example.
22. What are hydrate isomers? Explain with an example.
23. What is crystal field splitting energy?
24. What is crystal field stabilization energy (CFSE) ?
25. A solution of $\left[Ni(H_2O)_6\right]^{2+}$ is green, whereas a solution of $\left[Ni(CN)_4\right]^{2-}$ is colorless - Explain
26. Discuss briefly the nature of bonding in metal carbonyls.
27. What is the coordination entity formed when excess of liquid ammonia is added to an aqueous solution copper sulphate?
28. On the basis of VB theory explain the nature of bonding in $\left[Co(C_2O_4)_3\right]^{3-}$.
29. What are the limitations of VB theory?
30. Write the oxidation state, coordination number , nature of ligand, magnetic property and electronic configuration in octahedral crystal field for the complex $K_4\left[Mn(CN)_6\right]$.
