UNIT 6

SOLID STATE

Sir William Henry Bragg (1862 –1942) | Sir Lawrence Bragg (1890 –1971)

Sir William Henry Bragg was a British physicist, chemist, and a mathematician. Sir William Henry Bragg and his son Lawrence Bragg worked on X-rays with much success. They invented the X-ray spectrometer and founded the new science of X-ray crystallography, the analysis of crystal structure using X-ray diffraction. Bragg was joint winner (with his son, Lawrence Bragg) of the Nobel Prize in Physics in 1915, for their services in the "analysis of crystal structure by means of ray". The mineral Braggite (a sulphide ore of platinum, palladium and Nickel) is named after him and his son.

7RFDTE

Learning Objectives

After studying this unit, the students will be able to

- define the rate and order of a reaction,
- derive the integrated rate equations for zero and first order reactions,
- describe the half life period,
- describe the collision theory,
- discuss the temperature dependence of the rate of a reaction, and
- explain various factors which affect the rate of a reaction.
