Titration –II

(Link $FeSO_4$)Vs (Unknown $FeSO_4$ solution)

s.no	Volume of Unknown $FeSO_4$ (ml)	Burette readings		Concordant value (Volume of $KMnO_4$) (ml)	indicator
		Initial (ml)	Final (ml)		
1	20	0			Self ($KMnO_4$)
2	20	0			
3	20	0			

Calculation :

Volume of Unknown $FeSO_4$ solution V_1 = 20 ml

Normality of Unknown 2 solution V_2 = ? N

Volume of 2 (link) solution V_2 = ml

Normality $KMnO_4$ (link) solution = N

According to normality equation:

$V_1 \times N_1 = V_2 \times N_2$

$N_1 = \frac{x}{20} =$

$N_1 = \frac{x}{20} =$

The normality of unknown $FeSO_4$ solution = _____ N

Weight calculation:

The amount of $FeSO_4$ dissolved in 1 lit of the solution = (Normality) x (equivalent weight)

The amount of $FeSO_4$ dissolved in 750 ml of the solution $= \frac{\text{Normality x equivalentweight x 750}}{1000}$

= $FeSO_4$

= g

Report :

The normality of $KMnO_4$ Link solution = N

The normality of unknown $FeSO_4$ solution = N

The amount of $FeSO_4$ dissolved in 750 ml of the solution = g
