## Titration –II

## (Link HCl )Vs (Unknown NaOH solution)

| s.no | Volume of Unknown NaOH (ml) | Burette readings | | Concordant value (Volume of HCl) (ml) | indicator |
|---|---|---|---|---|---|
| | | Initial (ml) | Final (ml) | | |
| 1 | 20 | 0 | | | Phenolphthalein |
| 2 | 20 | 0 | | | |
| 3 | 20 | 0 | | | |

### Calculation :

Volume of Unknown NaOH solution $N_1$ = 20 ml

Normality of Unknown NaOH solution $N_1$ = ? N

Volume of HCl (link) solution $N_2$ = ml

Normality HCl (link) solution $N_2$ = N

### According to normality equation:

$V_1$

$$N_1 = \frac{V_2 \times N_2}{V_1}$$

$$\frac{\text{Normality x equivalentweight x 250}}{1000}$$

### Weight calculation:

The amount of NaOH dissolved in 1 lit of the solution = (Normality) x (equivalent weight)

The amount of NaOH dissolved in 250 ml of the solution $= \frac{\text{Normality x equivalentweight x 250}}{1000}$

$= \frac{\text{x 40 x 250}}{1000}$

= g

### Report :

1. The normality of HCl Link solution = N
2. The normality of unknown NaOH solution = N
3. The amount of NaOH dissolved in 750 ml of the solution = g
