17. Mention the differences between spermiogenesis and spermatogenesis.
18. At what stage of development are the gametes formed in new born male and female?
19. Expand the acronyms

    a. FSH b. LH c. hCG d. hPL
20. How is polyspermy avoided in humans?
21. What is colostrum? Write its significance.
22. Placenta is an endocrine tissue. Justify.
23. Draw a labeled sketch of a spermatozoan.
24. What is inhibin? State its functions.
25. Mention the importance of the position of the testes in humans.
26. What is the composition of semen?
27. Explain the process of fertilization and implantation of the fertilized ovum.
28. Define gametogenesis.
29. Describe the structure of the human ovum with a neat labelled diagram.
30. Give a schematic representation of spermatogenesis and oogenesis in humans.
31. Explain the various phases of the menstrual cycle.
32. Explain the role of oxytocin and relaxin in parturition and lactation.
33. Identify the given image and label its parts marked as a, b, c and d

34. The following is the illustration of the sequence of ovarian events (a-i) in a human female.

a) Identify the figure that illustrates ovulation and mention the stage of oogenesis it represents.

b) Name the ovarian hormone and the pituitary hormone that have caused the above-mentioned events.

c) Explain the changes that occurs in the uterus simultaneously in anticipation.

d) Write the difference between C and H.
