c) hCG, hPL, progesterone, prolactin
d) hCG, progesterone, estrogen, glucocorticoids

8. Match and select the correct option [NEET, 2018]

Column I	Column II
a. Proliferative phase	1. Breakdown of endometrium lining
b. Secretory phase	2. Follicular phase
c. Menstruation	3. Luteal phase

	a	b	c
A)	3	2	1
B)	**2**	**3**	**1**
C)	1	3	2
D)	3	1	2

Chapter 3 - Reproductive Health

1. Which of the following is a hormone releasing Intrauterine Device (IUD)? [AIPMT 2014]
a) Multiload 375 **b) LNG-20**
c) Cervical cap d) Vault
2. Assisted reproductive technology, IVF involves the transfer of [AIPMT 2014]
a) Ovum into the fallopian tube
b) Zygote into the fallopian tube
c) Zygote into the uterus
d) Embryo with 16 blastomeres into the fallopian tube
3. In context of amniocentesis, which of the following statements is incorrect? [NEET-I, 2016]
a) It is usually done when a woman is between 14-16 weeks pregnant
b) It is used for prenatal sex determination
c) It can be used for detection of Down syndrome
d) It can be used for detection of Cleft palate
4. Which of the following approach does not give the defined action of contraceptive? [NEET-I, 2016]

a) Barrier methods	Prevent fertilization
b) Intra uterine devices	Increases phagocytosis of sperms, suppresses sperm motility and fertilizing capacity of sperms
c) Hormonal contraceptives	Prevent retard entry of sperms, prevent ovulation and fertilization
d) Vasectomy	**Prevents spermatogenesis**

Chapter 4 - Principle of Inheritance and Variation

1. The fruit fly *Drosophila* melanogaster was found to be very suitable for experimental verification of chromosomal theory of inheritance by Morgan and his colleagues because [AIPMT MAINS 2010]
a) It reproduces parthenogenetically
b) A single mating produces two young flies
c) Smaller female is easily recognizable from large male
d) It completes the life cycle in about two weeks
2. Which one of the following cannot be explained on the basis of Mendel's Law of Dominance? [AIPMT PRE 2010]
a) The discrete unit controlling a particular character is called a factor
b) Out of one pair factors one is dominant and the other recessive
c) Alleles do not show any blending and both the characters recover as such in F2 generation
d) Factors occur in pairs
3. ABO blood groups in humans are controlled by the gene I. It has three alleles – IA, IB and i. Since there are three different alleles, six different genotypes are possible. How many phenotypes can occur? [AIPMT PRE 2010]
a) Three b) One **c) Four** d) Two
4. Which one of the following symbols and its representation, used in human pedigree analysis is correct? [AIPMT PRE 2010]
a) □=○=Mating between relatives
b) ○=Unaffected male
c) □=Unaffected female
d) ◊=Male affected
5. Which one of the following conditions correctly describes the manner of determining the sex in the given example? [AIPMT PRE 2011]
a) XO type of sex chromosomes determine male sex in grasshopper
b) XO condition in humans as found in Turner syndrome, determines female sex
c) Homozygous sex chromosomes(XX) produce male in Drosophila
d) Homozygous sex chromosomes(ZZ) determine female sex in birds
6. A normal-visioned man whose father was blind, marries a woman whose father was also colour blind. They have their first child as a daughter. What are the chances that this child would be colour blind? [AIPMT PRE 2012]
a) 100% **b) 0%** c) 25% d) 50%
7. Which of the following statements is not true of two genes that show 50 per cent recombination frequency [AIPMT 2013]
a) The genes may be on different chromosomes
b) The genes are tightly linked
c) The genes show independent assortment
d) If the genes are present on the same chromosome
8. A pleiotropic gene: [RE-AIPMT 2015]
a) Is a gene evolved during Pliocene
b) Controls a trait only in combination with another gene
c) Controls multiple traits in an individual
d) Is expressed only in primitive plants
9. A gene showing codominance has: [RE-AIPMT 2015]
a) Alleles tightly linked on the same chromosome
b) Alleles that are recessive to each other
c) Both alleles independently expressed in the heterozygote
d) One allele dominant on the other
10. Pick out the correct statements: [NEET-I, 2016]
a) Haemophilia is a sex-linked recessive disease
b) Down's syndrome is due to aneuploidy
c) Phenylketonuria is an autosomal recessive gene disorder
d) Sickle cell anaemia is an X-linked recessive gene disorder
