Points to remember:

- Python is a general purpose programming language created by Guido Van Rossum.
- Python shell can be used in two ways, viz., Interactive mode and Script mode.
- Python uses whitespace (spaces and tabs) to define program blocks
- Whitespace separation is necessary between tokens, identifiers or keywords.
- A Program needs to interact with end user to accomplish the desired task, this is done using Input-Output facility.
- Python breaks each logical line into a sequence of elementary lexical components known as Tokens.
- Keywords are special words that are used by Python interpreter to recognize the structure of program.
