

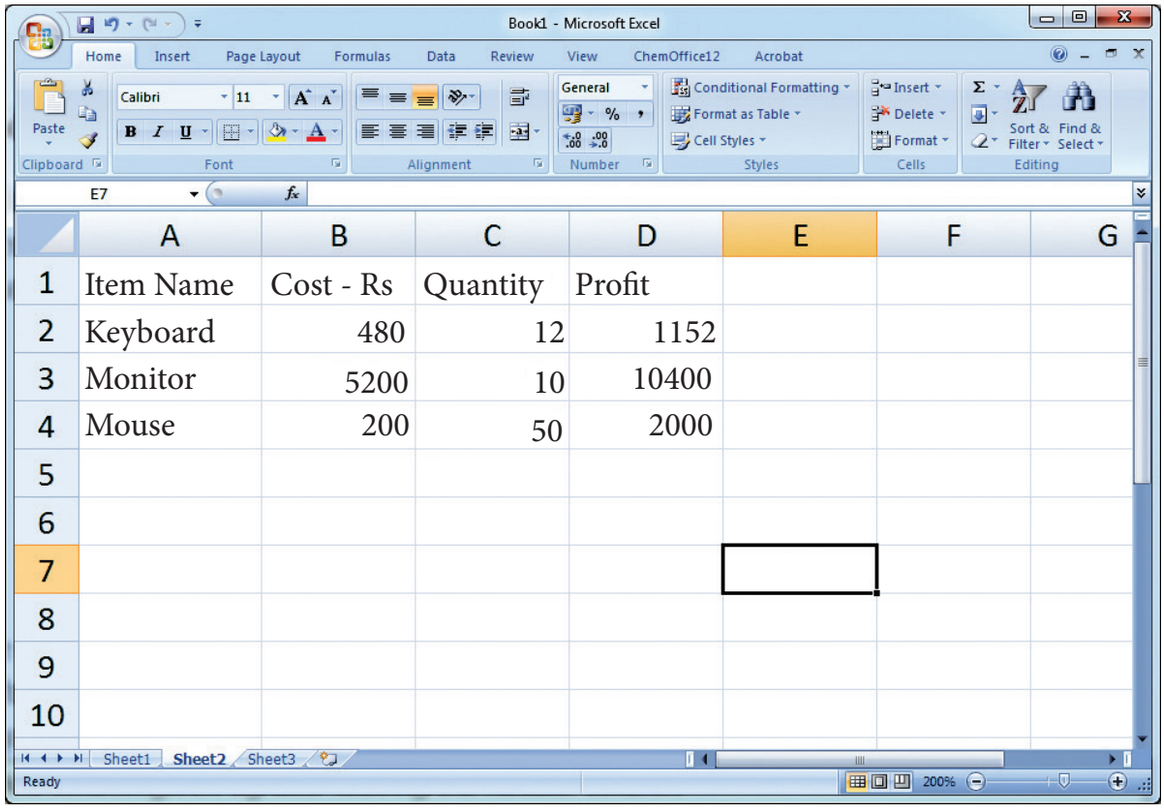

Fig 13.6.4 CSV file Data for a selected column for sorting

Since the row heading is also get sorted, to avoid that the first row should be skipped. This is can be done by using the command "next()". The list is sorted and displayed.

```
# sort a selected column given by user leaving the header column in
# descending order of value
import csv
# other way of declaring the filename
inFile= 'c:\pyprg\sample6.csv'
# opening the csv file which is in the same location of where the current #
python file
```
