15.4.1.4 Displaying Specified number of records using fetchmany(n)

Displaying specified number of records is done by using fetchmany(n). This method returns the number of rows of the result set.

Example 15.4.1.4-1: Program to display the content of tuples using fetchmany()

```
import sqlite3
connection = sqlite3.connect("Academy.db")
cursor = connection.cursor()
cursor.execute("SELECT * FROM student")
print("fetching first 3 records:")
result = cursor.fetchmany(3)
print(result)
```

OUTPUT

```
fetching first 3 records:
[(1, 'Akshay', 'B', 'M', 87.8, '2001-12-12'), (2, 'Aravind', 'A', 'M', 92.5, '2000-08-17'), (3, 'BASKAR', 'C', 'M', 75.2, '1998-05-17')]
```

Example 15.4.1.4-2: Program to display the content of tuples in newline without using loops

```
import sqlite3
connection = sqlite3.connect("Academy.db")
cursor = connection.cursor()
cursor.execute("SELECT * FROM student")
print("fetching first 3 records:")
result = cursor.fetchmany(3)
print(*result,sep="\n") # * is used for unpacking a tuple.
```

OUTPUT

```
fetching first 3 records:
(1, 'Akshay', 'B', 'M', 87.8, '2001-12-12')
(2, 'Aravind', 'A', 'M', 92.5, '2000-08-17')
(3, 'BASKAR', 'C', 'M', 75.2, '1998-05-17')
```

Note

* symbol is used to print the list of all elements in a single line with space. To print all elements in new lines or separated by space use sep= "\n" or sep= "," respectively.
