Example 15.9-1

```
# code for delete operation
import sqlite3
 # database name to be passed as parameter
conn = sqlite3.connect("Academy.db")
# delete student record from database
conn.execute("DELETE from Student where Rollno='2'")
conn.commit()
print("Total number of rows deleted :", conn.total_changes)
cursor =conn.execute("SELECT * FROM Student")
for row in cursor:
        print(row)
conn.close()
```

OUTPUT

```
