recovers itself by the process of successions . Find out the types of succession and explain.

25. Draw a pyramid from following details and explain in brief.

    Quantities of organisms are given-Hawks-50, plants-1000.rabbit and mouse-250 +250, pythons and lizard- 100 + 50 respectively.

26. Various stages of succession are given bellow. From that rearrange them accordingly. Find out the type of succession and explain in detail.

    Reed-swamp stage, phytoplankton stage, shrub stage, submerged plant stage, forest stage, submerged free floating stage, marsh medow stage.

## Glossary

**Ecosystem:** Study of interaction between living and non-living components

**Standing quality:** Total inorganic substances presents in any ecosystem at a given time and given area

**Standing crops:** Amount of living material present in a population at any time.

**Biomass:** Can be measured as fresh weight or dry weight of organisms

**Benthic:** Bottom zone of the pond

**Trophic:** Refers to the position of organisms in food chain

**Omnivores:** Those eats both plants and animals

**Food chain:** Refers movement of energy from producers up to top carnivores

**Food web:** Interlocking pattern of food chain

**Pyramid of number:** Refers number of organisms in a successive trophic level

**Pyramid of biomass:** Refers to quantitative relationship of the standing crops

**Pyramid of energy:** Refers transformation of energy at successive trophic levels

**Ten per cent law:** refers only 10 per cent of energy is stored in each successive trophic levels

**Bio geo chemical cycle:** Exchange of nutrients between organisms and environments

**Carbon cycle:** Circulation of carbon among organisms and environments

**Guano:** It is a accumulated excrement of sea birds and bats.

**Phosphorus cycle:** Circulation of Phosphorus among organisms and environments

**Succession:** Successive replacement of one type of plant communities by other on barren or disturbed area.

**Pioneers:** Invaded plants on barren area

**Primary succession:** Plants colonising on barren area

**Secondary succession:** Plants colonising on disturbed area.

**Climax communities:** Final establishment of plant communities which are not replaced by others.
