Formula

$$\text{Median} = l + \frac{\frac{N}{2} - m}{f} \times c$$

where $l = 20$, f $= 73.2$, m $= 183.3$, c $= 5$

$$\text{Median} = 20 + \left(\frac{185.5 - 183.3}{73.2}\right) \times 5$$

$$\text{Median} = 20 + \left(\frac{2.2}{73.2}\right) \times 5$$

Median = 20 + (0.03 × 5)

Median = 20 + 0.15

Answer: Median = 20.15

Mode

Mode is that value which occurs most frequently in a set of observation or the item which repeats itself the greatest number of times

Calculation of Mode

Example 13.5

Calculate mode for the following data

Station: Cochin

Direction	% of days wind blowing
N	2
NE	10
E	10
SE	6
S	5
SW	25
W	5
NW	7
Calm	10

Solution:

From the data 5 is repeated 3 times. Hence the Mode is 5

Answer: Mode = 5
