Construction of AC generator (Not for examination)

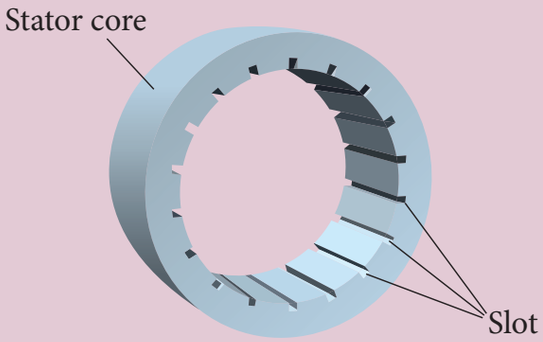

Alternator consists of two major parts, namely stator and rotor. (This box is given for better understanding of constructional details)

i) Stator

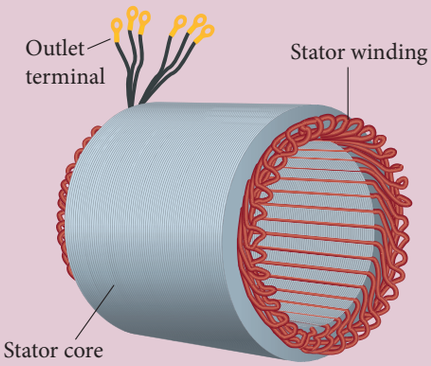

Stator has three components, namely stator frame, stator core and armature winding.

Figure(a): Stator core with empty slots

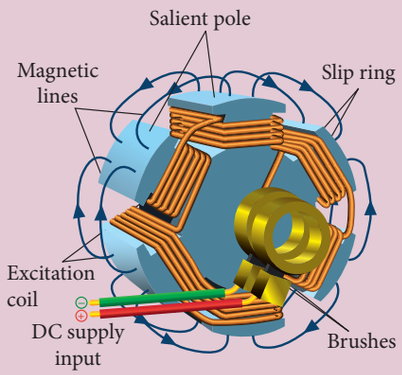

Figure(c): Stator core with armature windings

ii) Rotor

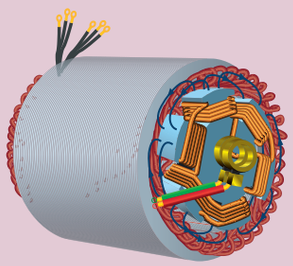

Rotor contains magnetic field windings, slip rings and brushes mounted on the same shaft.
