

P.C. Mahalanobis

By the Eleventh Plan it had come down to less than 20%. The Second Plan (1956–61), commonly referred to as the Mahalanobis Plan, stressed the development of heavy industry for achieving economic growth. The share of industry in Plan outlay was only 6% in the First Plan, and increased to about 24% after the Second Plan. But the share has been declining since the Sixth Plan, perhaps because the major investments in the public sector had been completed. The allocation for power development was very low in the first four plans and this created a huge shortage of power in the country.

The first two Plans had set fairly modest targets of growth at about 4%, which economists described as the "Hindu rate of growth". These growth rates were achieved so that the first two Plans were considered to have been successful. The targets in subsequent plans were not achieved due to a variety of factors. From the Fourth Plan (1969–74) the emphasis was on poverty alleviation, so that social objectives were introduced into the planning exercise. The targeted growth rates were reached from the Sixth Plan onwards.

The economy was liberalised during the Eighth Five Year Plan (1992–97). Since then, the growth rates have been in excess of 7% (except for a slowdown in the Ninth Plan).There has been considerable emphasis on growth with justice, and inclusive and sustainable growth.

Twelve five year plans have been made between 1951 and 2017. Twelfth Five Year Plan (2012-2017) was the last plan. In 2015, the Planning Commission was wound up and replaced by the NITI Aayog.

There are positive and negative assessments of the performance of planning in India.

Achievements

1. The expansion of the economy
2. The significant growth in national and per capita income
3. Increase in industrial production
4. Increased use of modern inputs in agriculture and increase in agricultural production
5. A more diversified economy.

9.5 Education, Science and Technology

(a) Education

Education and health constitute the social sectors, and the status of education and health indicators are yardsticks for assessing the level of social development in a country. Literacy levels have increased in India from 18.3% in 1951 to 74% in 2011. Female literacy still lags behind the male literacy rate at 65% as compared to 82% among men. There has been a great increase in the number of schools from the primary to senior high school level and in the growth of institutions of higher learning. In 2014 - 15 there were 12.72 lakh primary and upper primary schools, 2.45 lakh secondary and higher secondary schools, 38,498 colleges and 43 Central Universities, 316 State Universities, 122 Deemed Universities and 181 State Private Universities in the country.

Children dropping out of school mostly belonged to the poorer families in rural and urban areas. The drop-out rate is particularly high among girl children. There are great inter-regional variations in the drop-out and enrolment rates, so that backward states and regions have the poorest record on school education. Various initiatives are being taken by the government to such as Sarva Shiksha Abhiyan (SSA), Rashtriya Madhyamik Shiksha Abhiyan (RMSA) and the recently integrated scheme of Samagra Shiksha Abhiyan to redress the issue of dropouts.
