11.2 IUPAC Nomenclature

We have already learnt about naming the organic compounds according to IUPAC guidelines in XI standard. Let us recall the basic rules to name the alcohols.

1. Select the longest continuous chain of carbon atoms (root word) containing the functional group (-OH).
2. Number the carbon atoms in the chain so that the carbon bearing the -OH group has the lowest possible number.
3. Name the substituent (if any)
4. Write the name of the alcohol as below.

Prefix + Root word + Primary suffix + Secondary suffix
(substituents) (longest chain) (Saturation /unsaturation) (ol)

The following table illustrates the IUPAC nomenclature of alcohols.

Compound (common name, Structural formula, IUPAC Name)	IUPAC Name			
	Prefix with position number	Root used	Primary suffix	Secondary Suffix
Isopropyl alcohol  Propan-2-ol	-	Prop	ane	2-ol
Tertiary butyl alcohol  2-methylpropan-2-ol	2-methyl	Prop	ane	2-ol
Neopentyl alcohol  2,2-dimethylpropan-1-ol	2,2-dimethyl	Prop	ane	1-ol
Isobutyl alcohol  2-methylpropan-1-ol	2-methyl	Prop	ane	1-ol
