13.2.1 Nomenclature

a) Common system:

In common system, an aliphatic amine is named by prefixing alkyl group to amine. The prefixes di-,tri-, and tetra-, are used to describe two, three(or) four same substituent's.

b) IUPAC System:

Compound (common name, Structural formula, IUPAC Name)	IUPAC Name			
	Prefix with position number	Root used	Primary suffix	Secondary Suffix
Isopropylamine  Propan – 2- amine	–	prop	ane	2- amine
Allylamine  Prop-2-en-1-amine	–	prop	2-en	-1-amine
Hexamethylene diamine  Hexane – 1, 6 – diamine	–	Hex	ane	– 1, 6 – diamine
Methyl isopropyl amine  N – methyl propan – 2- amine	N – methyl	prop	ane	– 2- amine
Diethyl butylamine  N, N – Diethyl butan-1-amine	N, N – Diethyl	but	ane	-1-amine
Ethyl methyl isopropylamine  N – ethyl – N- methyl propan – 2 – amine	N – ethyl – N- methyl	prop	ane	-2-amine
