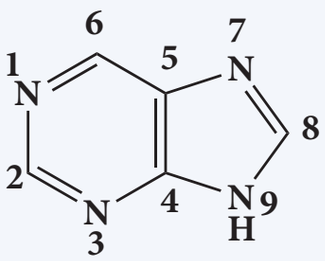
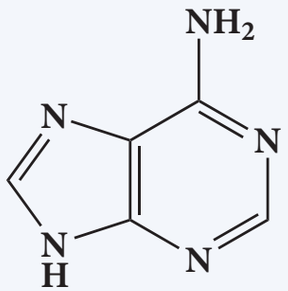
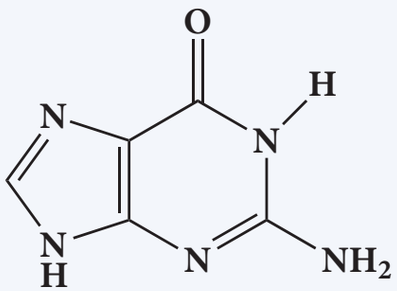
compounds, **pyrimidine** and **purine**. Both DNA and RNA have two major purine bases, **adenine** (A) and **guanine** (G). In both DNA and RNA, one of the pyrimidines is **cytosine** (C), but the second pyrimidine is **thymine** (T) in DNA and **uracil** (U) in RNA.



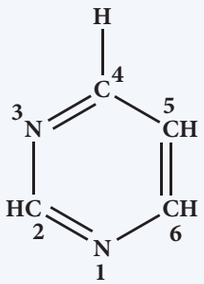
Purine



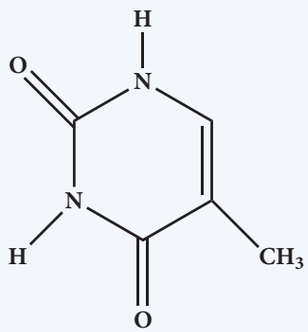
Adenine



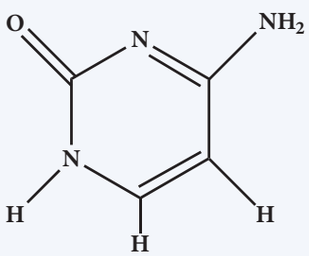
Guanine



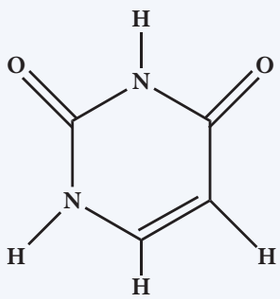
Pyrimidine



Thymine (T)



Cytosine (C)



Uracil (U)
