2) Analgesics (Non – narcotic) Analgesics reduce the pain without causing impairment of consciousness. **i) Anti-inflammatory drugs** **Example** Acetaminophen or paracetamol, Ibuprofen, Asprin. **ii) Antipyretics** Example **Salicylates** Acetylsalicylic acid (aspirin), **Acetaminophen or Paracetamol** **iii) Nonsteroidal anti-inflammatory drugs (NSAIDs)** Ibuprofen	They alleviate pain by reducing local inflammatory responses **Uses** Used for short-term pain relief and for modest painlike headache, muscle strain, bruising, or arthritis. These drugs have many other effects such as reducing fever (antipyretic) and preventing platelet coagulation. Due to this property, aspirin finds useful in the prevention of heart attacks Reduces fever by causing the hypothalamus to override a prostaglandin-induced increase in temperature..	 Acetylsalicylic acid (aspirin)  Paracetamol  Ibuprofen
3) **Opioids (Narcotic Analgesics)** **Examples** Morphine, codeine	Relive pain and produce sleep. These drugs are addictive. In poisonous dose,these produce coma and ultimately death. **Uses** Used for either short-term or long-term relief of severe pain. Mainly used for post operative pain, pain of terminal cancer.	 Morphine  codeine
