Achievements of Green Revolution

1. It brought down the scarcity of food grains.
2. It encouraged the farmers to test new varieties of high yield seeds and varieties of crops.
3. It stimulated to bring radical changes in fishing, poultry and dairy industries namely Blue, Yellow and White Revolution.
4. Cash and spice crops were also given equal importance which led India to export cash crops to various countries resulting in high export earnings. However, other necessary crops like sugarcane, oilseeds and cereals were not shown adequate interest by the farmers. Their importance was felt only during 1970's and early 1980's.

White Revolution

In 1950's, India was not just struggling to achieve self-sustenance in agriculture production, but also in producing milk products such as dairy milk, butter and infant feeds. India has been importing butter, milk power and infant milk feeds.

Very similar to revolution in agriculture the need was felt in animal husbandry to produce milk products.

Major Reasons for the White Revolution

Rearing cows and buffaloes was considered secondary to agriculture.

It was non-profit mode of small scale industry because of its primitiveness and poor maintenance of farms and animal sheds.

The milk producing animals such as cows and buffaloes were native Indian origin which did not produce enough milk to supply bigger population.

Farming in India was a rural industry which was suffering from necessary supporting systems like transportation, preservation and distribution of milk and other dairy products.

Farming also suffered from the usage of age old primitive technology and inadequate of veterinary specialists. Mortality rate of cows and buffaloes was very high due to communicable diseases which forced the milk vendors to show a very poor interest to continue the business in a large scale. A rural development programme was started by India's National Dairy Development Board (NDDB) in 1970. This national grid aimed to augment the milk production and distribute across all parts of the nation so as to prevent shortage of milk products.

Do YOU KNOW?

Tamil Nadu Co-operative Milk Producers' Federation (TCMPF)

The Tamil Nadu Dairy Development Corporation Limited was formed in 1972 to manage the activities such as milk procurement, processing and marketing of the milk and milk products. Based on Dr.Kurien pattern, Tamil Nadu Co-operative Milk Producers' Federation (TCMPF) was formed in 1981. The per capita availability of milk in Tamil Nadu has increased from 169 gm/day in 1993-94 to 268 gm/day in 2017-18.

The Government of India adopted the method and process followed by Gujarat's AMUL (Anand Milk Union Limited) founded by Verghese Kurien. AMUL had a humble beginning in 1950's in Gujarat with less then 200 farms. Milk was collected from these farms and it was supplied to the consumers in Mumbai(then
